

S80 SERIES

The **S80** series, in the compact sturdy metal housing, offers innovative class 2 laser distance sensors with time of flight measurement. This technology, based on the measurement of the time between the emission and receipt of the laser light pulses, effects accurate distance detection.

The **S80-Y0** and **S80-YL0** sensors function as proximity on respectively a 0.3 - 4 m distance, or from 0.3 to 7 m with scalable range, in object positioning or detection applications.

The **S80-Y1** and **S80-Y2** sensors, with operating distances reaching 20 or 100 m, function as retroflex measuring the distance from a reflector mounted on the object to detect. All models have two switching outputs, available in both the NPN and PNP models, that can be set at different distances, while the measurement value is supplied on the 4-20 mA analogue output and RS485 serial interface; the latter can be also used to set all the parameters.

Moreover the **S80-YL0** version offers the possibility to scale the 4-20 mA analogue output. This feature allows to set the minimum and maximum values of the operating distance and link the minimum and maximum current.

A 4-digit display visualises the distance, as well as all the parameters that can be set with the three push-buttons.

MEASUREMENT

HIGHLIGHTS

- High precision and speed
- Proximity measurement range scalable from 0 to 7 m
- Retroreflex measurement range reaching 20 or 100 m on reflector
- 4 digit display and RS485 serial interface

APPLICATIONS

Automatic warehouse

Automotive

Wood

The laser distance sensors with time of flight measurement are suitable for long distance measurements offering constant performances on the entire range.

The linearity indicates the maximum deviation of the analogue output respect to the ideal value and is expressed in percentage of full range.

Whereas the temperature drift indicates the maximum deviation in relation to the sensor temperature variation and is expressed in mm/°C.

Lastly, the repeatability represents the variation interval of the measurement made different times on the target at the same distance. The product is not suitable to be used for OUTDOOR application.
